Experience

Treet – San Francisco, CA
Founding Software Engineer - January 2024 – present
- 6th engineer at Treet, an e-commerce startup that builds resale and inventory liquidation for brands
- Built the core seller listing flow powering 300+ brand marketplaces
- Architected data pipeline to ingest and normalize data across multiple e-commerce platforms
- Led data migration to PostgresSQL with new GraphQL APIs and double-write systems with zero downtime
- Drove platform reliability through 100+ incident resolutions to scale traffic 10x to our microsites
- Helped drive internal adoption of coding agents, automated alerting, and AI usage within team

Phaselab – Remote
Founding Software Engineer - July 2023 – November 2023
- 2nd hire and founding application engineer at phaselab.co
- Helped stand up a new product for identifying and rectifying privacy issues in a company's data stack

Pavilion (formerly CoProcure) – San Francisco, CA
Founding Software Engineer - June 2021 – July 2023
- 6th engineer and 11th hire at Pavilion, a civic tech startup that builds a search engine for reusable contracts
- Product focused engineer that owned projects end-to-end from ideation, to design, to production
- Strong skills in writing and maintaining a stack built with React and Django web framework
- Led company redesign for all product pages and design system, coordinating cross-functionally across teams

Affirm – San Francisco, CA
Software Engineering Intern - May 2020 – August 2020
- Intern on Financial Instruments team.
- Built a new workflow to automate reimbursements by check
- Used ETL pipelines in Python using Apache Spark, and the Luigi framework for task scheduling.
